Overview of AWS Foundational Technical Review (FTR)

Foundational Technical Review (FTR)

The AWS Foundational Technical Review (FTR):

- Enables Partners to identify and remediate risks in their products or solutions
- Ensures that the products AWS recommends to its customers are following basic security, reliability, and operational excellence best practices
- Is the first step in working with APN

What are the benefits of completing a FTR?

Mitigate Risk Reduce risks around **security, reliability, and operational excellence**

Review Architecture Review architecture base on **AWS Well-Architected Framework**

Access Benefit Gain benefit **AWS Competency and AWS ISV Accelerate Program**

Promote solution Earn AWS badging **“Qualified Software”** to promote your product

*** 'Validated' status serves as the baseline requirement for co-sell participation.**

Offering Component Types of a FTR:

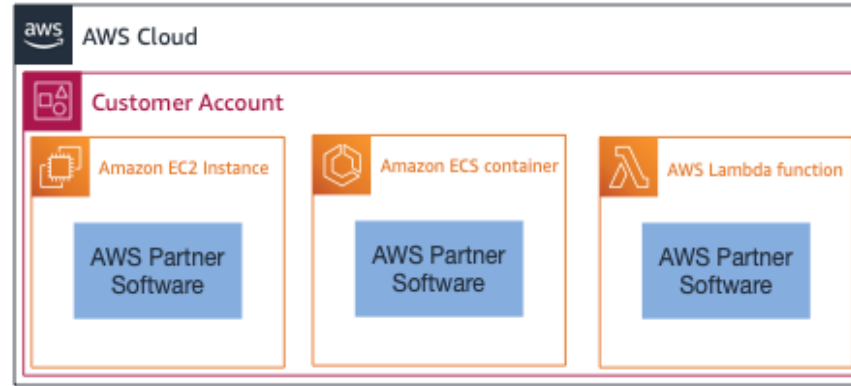

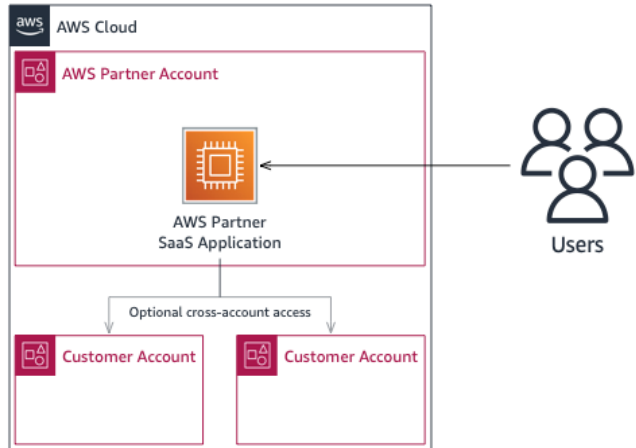

The specific process and requirements for the FTR will depend on how and where the components of your product are deployed and managed. For the purposes of the FTR, components are categorized based on the following attributes:

1. **Who is responsible for deploying and managing the software** (i.e., the AWS

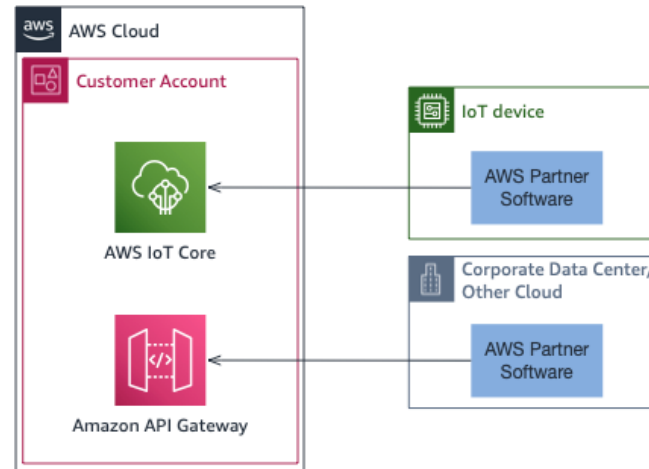

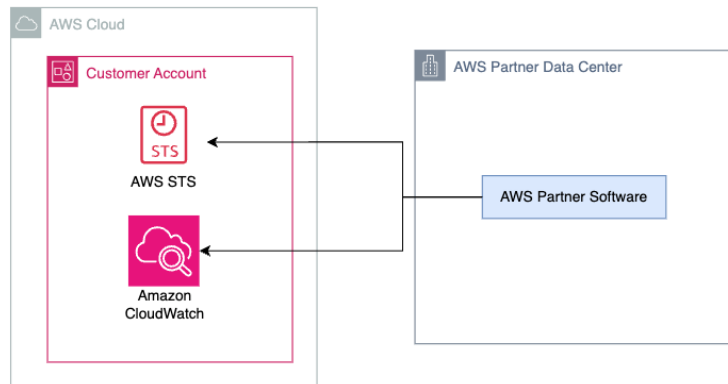

Partner or the customer)

2. **Where the software runs** (i.e., on AWS or in another environment)

Components of Offerings

Other

Partner Hosted

Customer Deployed

Review Process

Review process

- Submit FTR request in Partner Central for review

- Receive feedback and complete remediations within 6 months from the initial review date

- Identify and complete the appropriate FTR checklist to conduct a self-assessment for an offering
- Generate CIS AWS Foundations Benchmark 1.4 or 3.0 report using AWS Security Hub.

- The system will review your FTR submission and artefacts.
- If all is good, FTR will be approved automatically. Otherwise an AWS Partner Solutions Architect (PSA) will review your submitted documents and contact you via email.

Demo

Common challenges

FTR documentation

- Ensure the Self-Assessment Validation Checklist that applies to your solution is the **latest version**
- The FTR checklists evolve overtime, and **some requirements are added or removed**
- Links to the latest version of the checklist for each component type can be found in the [AWS Foundational Technical Review Guide](#)

Partner Hosted Foundational Technical Review

Partner Hosted Validation Checklist

Introduction

Expectations of parties

AWS Foundational Technical Review prerequisites

Partner-hosted FTR requirements

- Hosting
- Support level
- Architecture review

Architectural and Operational Controls

- AWS root account
- Communications from AWS
- Identity and Access Management

Partner Hosted Foundational Technical Review

Partner Hosted Validation Checklist

August 2024 - 2024_q3_v1

This Partner Hosted Foundational Technical Review Checklist updated to version (2024_q3_v1) has gone into effect on August 5, 2024. Partners may choose to use the [previous checklist version \(2024_q1_v1\)](#) until November 3, 2024 when the checklist will no longer be in effect. All applications submitted after November 3, 2024 are required to comply with the current Validation Checklist requirements.

[Self-assessment Spreadsheet](#)

Introduction

The Foundational Technical Review (FTR) assesses an AWS Partner's solution against a specific set of Amazon Web Services (AWS) best practices around security, performance, and operational processes that are most critical for customer success. Passing the FTR is required to qualify AWS Software Partners for AWS Partner Network (APN) programs such as AWS Competency and AWS Service Ready but any AWS Partner who offers a technology solution may request a FTR review through AWS Partner Central.

This checklist is applicable to solutions which are hosted by the Partner on AWS (for example, SaaS solutions). All critical application components must be hosted on AWS. If your solution does not meet these requirements, refer to the [Foundational Technical Review Checklist Index](#) . You may use external providers for edge services such as content delivery networks (CDNs) or Domain Name System (DNSs), or corporate identity providers.

This checklist is also available in [Chinese-simplified](#), [Chinese-traditional](#), [Korean](#), [Japanese](#), [Portuguese](#), and [Spanish](#).

Partner hosted on AWS – Automated Security Report

- For Partner Hosted on AWS FTR reviews, you must submit an **automated security report** that evaluates your infrastructure
- You can use AWS Security Hub or any other tool that supports the **CIS AWS Foundations Benchmark 1.4 or 3.0** to evaluate your AWS accounts.

NOTE: Not all the CIS controls are required to be passed in scope of FTR. Please check the [FTR Guide](#) for the required CIS controls.

The screenshot shows the 'Enable AWS Security Hub' page in the AWS console. At the top, there is a breadcrumb 'Security Hub > Enable AWS Security Hub'. The main heading is 'Enable AWS Security Hub'. Below this, there is a section titled 'Enable AWS Config' with a paragraph of text explaining that resource recording must be enabled in AWS Config before Security Hub standards can be enabled. A 'Download' button is located at the bottom right of this section. Below the 'Enable AWS Config' section is a 'Security standards' section. It contains a paragraph stating that enabling Security Hub grants permissions to conduct security checks using Amazon CloudWatch, Amazon SNS, AWS Config, and AWS CloudTrail. Below this paragraph is a list of security standards with checkboxes:

- Enable AWS Foundational Security Best Practices v1.0.0
- Enable AWS Resource Tagging Standard v1.0.0
- Enable CIS AWS Foundations Benchmark v1.2.0
- Enable CIS AWS Foundations Benchmark v1.4.0
- Enable CIS AWS Foundations Benchmark v3.0.0
- Enable NIST Special Publication 800-53 Revision 5
- Enable PCI DSS v3.2.1
- Enable PCI DSS v4.0.1

Resiliency and Disaster Recovery (DR) Section

- In all FTR Reviews, there are requirements around application resiliency and Disaster Recovery (DR) Plans.
 - **Recovery Time Objective (RTO)**: is the maximum acceptable delay between the interruption of service and restoration of service. This objective determines what is considered an acceptable time window when service is unavailable and is defined by the organization.
 - **Recovery Point Objective (RPO)**: is the maximum acceptable amount of time since the last data recovery point. This objective determines what is considered an acceptable loss of data between the last recovery point and the interruption of service and is defined by the organization.
 - **Resiliency Testing**: Test resiliency to ensure that RTO and RPO are met, both periodically (minimum once a year) and after major updates. The resiliency test must include accidental data loss, instance, and Availability Zone (AZ) failures. At least one Resiliency test that meets RTO and RPO requirements must be completed prior to FTR approval.

Case Study

Thinknum's **AWS FTR Success Story**: Enhanced Security, Reliability & Compliance

Enhancing Security Enforcement and Improving Reliability

- Improved Identity Management
- Enhanced Log Management
- Robust Backup Strategy

Simplifying Compliance Management

- Enhanced Regulatory Alignment
- Improved Organizational Culture

Reference: <https://aws.amazon.com/blogs/apn/thinknum-gains-valuable-benefits-through-the-aws-foundational-technical-review/>

“AWS has been Thinknum’s trusted partner since our earliest days as a startup,” says Gregory Ugwi, Chief Executive Officer at Thinknum.

“The FTR process helped us strengthen our security posture in concrete ways that our clients appreciate, and I sincerely recommend it to other tech companies.”

FTR FAQs

Q: Do FTR include code review?

A: No, AWS reviewing your application code is not in scope for an FTR Review.

Q: How long do FTRs remain valid for?

A: Partners are required to renew their *Approved* FTR status every 3 years.

Q: Can we reply with N/A to some requirements?

A: Yes, we acknowledge the diversity in solutions and offerings. We will require an explanation on why you think it doesn't apply.

Call to Action

- **Prepare and request FTR by 30-March-2025**
- **Apply Remediation and get FTR Validated 30-April-2025**
